## Exp: 2B Diffie Hellman Algorithm

Date: 16-03-2024

#### Aim:

To write a python program implementing the Diffie Hellman algorithm.

# Algorithm:

- 1. P, G => available public keys. P, G => available public keys.
- 2. a is selected as a private key. b is selected as a private key.
- 3. Eq. to generate key:  $x=G^a \mod P$ . Eq. to generate key:  $y=G^b \mod P$ .
- 4. After exchanging keys, user1 receives key y. After exchanging keys, user2 receives key x.

### **Program:**

```
def prime_checker(p):
    if p < 1:
     return -1
  elif p > 1:
     if p == 2:
        return 1
     for i in range(2, p):
         if p % i == 0:
           return -1
        return 1
def primitive_check(g, p, L):
     for i in range(1, p):
        L.append(pow(g, i) % p)
     for i in range(1, p):
        if L.count(i) > 1:
        L.clear()
        return -1
     return 1
```

```
while 1:
  P = int(input("Enter P : "))
  if prime_checker(P) == -1:
     print("Number Is Not Prime, Please Enter Again!")
     continue
  break
while 1:
  G = int(input(f"Enter The Primitive Root Of {P} : "))
  if primitive_check(G, P, I) == -1:
     print(f"Number Is Not A Primitive Root Of {P}, Please Try Again!")
     continue
  break
x1, x2 = int(input("Enter The Private Key Of User 1:")), int(
  input("Enter The Private Key Of User 2:"))
while 1:
  if x1 >= P or x2 >= P:
     print(f"Private Key Of Both The Users Should Be Less Than {P}!")
     continue
  break
y1, y2 = pow(G, x1) \% P, pow(G, x2) \% P
k1, k2 = pow(y2, x1) \% P, pow(y1, x2) \% P
print(f"\nSecret Key For User 1 Is {k1}\nSecret Key For User 2 Is {k2}\n")
if k1 == k2:
  print("Keys Have Been Exchanged Successfully")
else:
  print("Keys Have Not Been Exchanged Successfully")
```

#### **Output:**

```
[student@localhost ~]$ vi diffie.py
[student@localhost ~]$ python3 diffie.py
Enter P: 11
Enter The Primitive Root Of 11: 7
Enter The Private Key Of User 1: 3
Enter The Private Key Of User 2: 2

Secret Key For User 1 Is 4
Secret Key For User 2 Is 4

Keys Have Been Exchanged Successfully
[student@localhost ~]$ ■
```
